REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: the closest prior art, to Hosono et al (US 2002/0172726) and Kuo et al (US 5391440), alone or in combination, do not teach or suggest the invention as presently claimed. Hosono teaches the formation of oxygen radical containing calcium aluminate of $12\text{CaO} \cdot 7\text{Al}_2\text{O}_3$ (C_{12}A_7) with an oxygen radical content of at least 10^{20} cm^{-3} , as discussed in the January 8, 2008 Office Action. However, it does not teach thermal spraying the powder. While Kuo teaches the thermal spraying of a powder that can include $12\text{CaO} \cdot 7\text{Al}_2\text{O}_3$ as discussed in the January 8, 2008 Office Action, neither reference provides thermal spraying under the conditions so that the powder is melted "only at the surface of the powder or in the vicinity of the surface of the powder" (as now required by independent claim 1) and providing the deposition such that the resulting film also comprises "deposited crystalline $12\text{CaO} \cdot 7\text{Al}_2\text{O}_3$ (C_{12}A_7) having an oxygen radical content of at least 10^{20} cm^{-3} " (as now required by independent claim 1). Kuo, for example, indicates that the sprayed flux particles (the $12\text{CaO} \cdot 7\text{Al}_2\text{O}_3$) "form a transient liquid phase which diffuses into the interconnection material bulk lattice" (column 10, lines 10-15), indicating melting at more than just the surface or vicinity of the surface. Moreover, Arima et al (US 5480438) was also cited in the January 8, 2008 Office Action (paragraph 12) as indicating the known plasma spraying of calcium aluminate, but it also does not indicate the suggestion to provide the spraying under the conditions so that the powder is melted "only at the surface of the powder or in the vicinity of the

surface of the powder" (as now required by independent claim 1) and providing the deposition such that the resulting film also comprises "deposited crystalline $12\text{CaO} \cdot 7\text{Al}_2\text{O}_3$ (C_{12}A_7) having an oxygen radical content of at least 10^{20} cm^{-3} ".

Applicant also provided an information disclosure statement on December 17, 2007 that cited WO 03/050037 and provided a Japanese Patent Office Action using this reference. However, this reference (as translated by Hosono et al (US 2005/0061657, hereinafter Hosono '657, the US national stage application of WO 03/050037) also does not provide the teaching or suggestion of the presently claimed invention. Hosono '657 teaches the use of calcium aluminate oxides, including $12\text{CaO} \cdot 7\text{Al}_2\text{O}_3$ (C_{12}A_7) (paragraph [0030]) and teaches the plasma spraying of the material (paragraph [0043]), but does not teach the particular amount of oxygen radical content in the material or the resulting sprayed product or that the plasma spraying should be such that the powder is melted "only at the surface of the powder or in the vicinity of the surface of the powder" (as now required by independent claim 1).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Katherine A. Bareford whose telephone number is (571) 272-1413. The examiner can normally be reached on M-F(6:00-3:30) First Friday Off.
